

## Cash Financial Analysis

After the lighting survey conducted on site, the following calculations and estimates can be made:

Demand for Lighting per hour		Electricity Consumption per day		Monthly Cost	
Before	After	Before	After	Before	After
1.145 kWh	0.130 kWh	27.481 kWh	3.111 kWh	R 1,003.04	R 113.57
Project Cost ex VAT		Expected Monthly Saving		% Saving	
R 22,127.22		R 889.47		89%	

The breakeven point is calculated as the amount of time (in months) that the savings achieved from retrofitting old technologies will take to recover the initial project expense.

## How the calculations are done (unrelated example)

The running costs indicated below is based on 10 burning hours per day (07:00 until 17:00) for 25 days per month. A cost of R1.00 per kWh is assumed.

## Scope of Works

This project entails the supply and installation of 17 efficient lighting technologies to retrofit or replace 17 inefficient lighting sources found at the premises of Anton Res. Measurements were done to show savings in consumption more accurately. No measurements were done, which means that all savings are based on estimated values. Work to be completed per specified location is described below.
